Project Title	Real-Time Communication & Logistics for Fast Paced Hospitality and Events									
Project Description	<u>About the company:</u> This is a capstone project team initiative. The team is acting as a startup aiming to design and prototype a communication and operations tool tailored for hospitality atmospheres. <u>About the project:</u> The project aims to develop a communication and logistics application for hospitality settings. The app will streamline real-time communication between departments (front desk, bar staff, security, kitchen, and management) and provide tools for inventory management, scheduling, and staff coordination. Unlike generic communication platforms, this app is designed specifically for fast-paced, high-pressure hospitality environments where noise, mobility, and lighting challenges make traditional tools impractical.									
Problem/ Opportunity Assessment *	<i>Please describe current state problem/opportunity that describes the nature and extent of the problem (factual, quantified, concise), or that outlines a chance for advancement or progress.</i> Communication Issues: It's difficult to coordinate between front-of-house (security, hosts, servers) and back-of-house (bar staff, managers) during peak hours. The most common methods involve flagging each other down, texts, phone calls and getting close enough to where you can hear instructions. Lack of visibility: Managers lack real-time insight into staff roles, responsibilities, and task completion, creating bottlenecks in operations. Inefficient logistics: Inventory is often tracked manually, causing delays in reordering and shortages during peak nights. Multi-location challenges: Clubs with multiple venues struggle to track staff and operations across properties.									

	5. Practical barriers: Staff often wear gloves or have dirty hands, making it impractical to check or respond to phones, leading to communication breakdowns. 6. Post-event blind spots: Current management practices often lack structured after-event research. Without data, it's hard to evaluate service efficiency, staffing levels, and inventory accuracy, leaving managers with little to learn from.
Desired Project Outcomes/ Requirements*	<i>Define how this project shall address a business need, e.g. the business problem or opportunity described above; describe what the beneficiary must be able to do / receive from the solution</i> 1. A real-time staff communication system with custom alerts, buzz patterns, and role-based notifications to reduce reliance on voice or phone-based coordination. 2. Improved Service Efficiency a lot of time is wasted in the effort to locate floor staff to delegate tasks. This wasted time would be reduced if floor staff could be notified remotely and efficiently 3. An inventory management module where club staff can update counts live, and managers can review/order. 4. A multi-location login system so staff/managers can switch between different club properties. 5. Role-based dashboards providing real-time access to schedules, task assignments, and inventory, with different views for staff vs. managers. 6. A reporting & analytics module that compiles staff activity, inventory usage, and communication logs into post-event reports. These reports provide actionable insights on performance (e.g., busiest times, shortages, response times) to help managers optimize future events.
Key Deliverables to be produced by students*	<i>Define the boundaries of work that you expect to receive from the students effort (vs. internal effort)</i> 1. A functional prototype app (mobile-first or web-based) enabling staff to log in, see roles, and send alerts/messages. 2. A basic staff map/dashboard showing who's working, where they're assigned, and their availability. 3. An inventory module prototype for updating counts and generating low-stock alerts. 4. A requirements & design document outlining app architecture, scalability, and integration possibilities. 5. A role-based system with user profiles and secure multi-venue management.
Desired Start Date	
Desired End Date	
Attachments	<i>List attachments that support project description</i> 1. The Future of Staff Communication in Clubs with ClubsHR 2. 5 HR Red Flags Your Club Shouldn't Ignore

* Please add fields as required

Notes:

- Ideas should be based on some kind of business model
 - o Cant just be data entry scenario, no search engine
- Application should perform a few key features, other things can be supporting these features (chatbot, notifications, etc.)
- Should be focused more on generic clubs, not so specific
 - o Maybe just “fast-paced” environments
- Terminology needs to be more general, for academic purposes
- Communications/operations for hospitality
